

## Table of Contents

Preface	IX
Organization	XI
<i>Soil/structural support</i>	
Use of DEM to model the interlocking effect of geogrids under static and cyclic loading <i>H. Konietzky, L. te Kamp, T. Groeger &amp; C. Jenner</i>	3
DEM modeling of soil geocomposite material for rockfall impact <i>D. Bertrand, F. Nicot &amp; Ph. Gotteland</i>	13
Microstructure modeling of granular media and interactions between pile and granular ground by DEM <i>K. Maeda, T. Sakurai, A. Oomura &amp; H. Hirabayashi</i>	21
<i>Slope and wall stability</i>	
Application of <i>PFC<sup>3D</sup></i> for determination of soil properties and simulation of the excavation process in front of sheet pile wall constructions <i>M. Pohl, M. Pulsfort &amp; B. Walz</i>	35
Finite element and discrete element modeling for the solution of spatial active earth pressure problems <i>F. tom Woerden, M. Achmus &amp; K. Abdel-Rahman</i>	45
Numerical study on the cause of a slope failure at a gravel pit using <i>PFC</i> and <i>FLAC</i> <i>T. Sakakibara, M. Ujihira &amp; K. Suzuki</i>	51
Evaluation of castle stone wall stability with the particle flow code <i>M. Mizumoto &amp; G.Q. Cao</i>	57
<i>Rock fractures</i>	
Simulation of rock cutting using distinct element method – <i>PFC<sup>2D</sup></i> <i>S. Lei, P. Kaitkay &amp; X. Shen</i>	63
Evaluation of behavior of EDZ around rock cavern by AE measurements and <i>PFC</i> simulation <i>K. Aoki, Y. Mito, T. Mori &amp; T. Maejima</i>	73
Numerical simulation of the mechanical behavior of discontinuous rock masses <i>E.-S. Park, C.D. Martin &amp; R. Christiansson</i>	85
<i>Industrial</i>	
Introduction of research and development on electromechanics of electromagnetic particles for imaging technology <i>H. Kawamoto</i>	95
DEM simulation of bulk material flow in a feeding system of blast furnace <i>J.F. Ferellec, C. Mochizuki &amp; A. Hirata</i>	103
Using particle flow code to investigate energy dissipation in a rotary grinding mill <i>R.S. Sarracino, A.T. McBride &amp; M.S. Powell</i>	111
The modeling of the separation process in a ferrohydrostatic separator using discrete element method <i>V. Murariu, J. Svoboda &amp; P. Sergeant</i>	119

A discrete particle contact model for sintering <i>S. Luding</i>	127
Discrete element modeling for dynamics of vibro-impact system <i>M. Saeki</i>	135
<i>Shear flow</i>	
GEM simulation of shear flows in granular media <i>Y. Kishino</i>	143
$PFC^{3D}$ modeling of inter-particle percolation in caved rock under draw <i>M.E. Pierce</i>	149
Flow behavior of cohesive and frictional fine powders <i>S. Luding, R. Tykhoniuk, J. Tomas, L. Heim, M. Kappl &amp; H.-J. Butt</i>	157
Mixtures of rolling and non-rolling circular disks studied at high shear strains <i>T. Vietor</i>	165
<i>Geology</i>	
Simulation of magmatic fabrics using <i>PFC</i> <i>Y. Park, C. Lee &amp; J.-H. Ree</i>	175
Simulation of a two-dimensional 'thin-skinned' orogenic wedge using <i>PFC</i> <i>C. Lee, Y. Park &amp; S. Kwon</i>	181
Simulation of accretionary prisms by distinct element method <i>Y. Yamada, S. Ueda &amp; T. Matsuoka</i>	187
Numerical simulation of gas hydrate behavior in marine sediments using <i>PFC<sup>2D</sup></i> <i>S. Kreiter, B. Grupe &amp; V. Feeser</i>	191
The particle flow code, <i>PFC<sup>2D</sup></i> , applied in planetary studies to model the tectonic evolution of chasma walls on Mars <i>B. Imre</i>	199
<i>Theory &amp; development</i>	
On a new numerical analysis method for fracture problems <i>M. Hori &amp; K. Oguni</i>	209
A self-similar bond model for <i>PFC<sup>2D</sup></i> <i>P.A. Cundall</i>	217
A grid computing architecture for applications in distributed computation <i>X. Lin &amp; J.R. Williams</i>	225
<i>Ab initio</i> emergent phenomena in <i>PFC</i> <i>B.E. Hobbs, A. Ord, K. Regenauer-Lieb, F. Boschetti, Y. Zhang &amp; S. Durrlemann</i>	235
Discrete computational methods as the tools for studying behavior of materials, structures and complex media on different scales <i>S.G. Psakhie</i>	241
Application of an ellipsoid approximation to discrete/distinct element modeling <i>S. Johnson, J.R. Williams &amp; B.K. Cook</i>	249
<i>Fluid coupling</i>	
Fluid coupling in <i>PFC<sup>3D</sup></i> using the measurement spheres <i>Y. Okura, H. Ochiai, P.A. Cundall &amp; Y. Shimizu</i>	257

Flow deformation of a river dike due to seismic liquefaction <i>T. Honda &amp; I. Towhata</i>	265
A study on the calculation of particle volumetric deformation in a fluid coupled <i>PFC</i> model <i>L. Li &amp; R.M. Holt</i>	273
Fluid coupling in <i>PFC</i> <sup>2D</sup> and <i>PFC</i> <sup>3D</sup> <i>Y. Shimizu</i>	281
Design of gas storage rock cavern by the hydro-mechanical coupled discrete model <i>K. Aoki, Y. Mito, T. Matsuoka &amp; D. Kondoh</i>	289
DEM-fluid model development for near-wellbore mechanics <i>B.K. Cook, D.F. Boutt, O.E. Strack, J.R. Williams &amp; S.M. Johnson</i>	301
 <i>Lab/element tests</i>	
Micromechanical modeling of granular materials under triaxial and oedometric loading <i>R. Katzenbach &amp; A. Schmitt</i>	313
Particle shape influence on the fracture behavior of concrete <i>N.M. Azevedo &amp; J.V. Lemos</i>	323
The use of particle flow code for investigating the stress memory effect in rocks <i>V. Louchnikov, S.P. Hunt &amp; A.G. Meyers</i>	331
Numerically modeling the strength of ice using discrete elements <i>L.U. Arenson</i>	341
Effects of intergranular adhesive force on behavior of granular material <i>S. Kato, T. Sakakibara &amp; H. Yoshimori</i>	347
Development of compressive failure analysis of concrete specimen by 3-dimensional distinct element method <i>D. Haraki, H. Shiraishi &amp; S. Katsuki</i>	355
Experimental validation of modeling irregular particle shapes using DEM <i>A.M. Sallam, A.K. Ashmawy &amp; B.D. Runkles</i>	363
Three-dimensional discrete element simulations of direct shear tests <i>C. O'Sullivan, L. Cui &amp; J.D. Bray</i>	373
Calibration of a distinct element model for rock failure envelope and tensile strength <i>A. Fakhimi &amp; T. Villegas</i>	383
Influence of stress history on <i>in situ</i> and core compaction <i>R.M. Holt, C.J. Kenter, B. Verboom &amp; D. Doornhof</i>	391
Numerical modeling of weak sand behavior <i>R. Narayanasamy</i>	397
Macro-mechanical behavior for an assembly of grains modeled by bonding spheres <i>Y. Nakata, M.D. Bolton &amp; Y.P. Cheng</i>	407
Elasto-visco-plastic constitutive model of sea ice with strain rate dependent ice strength <i>D. Zyryanov &amp; R. Korsnes</i>	415
3-D image-based discrete element modeling for irregularly-shaped grains <i>T. Matsushima</i>	421
Comparison between numerical and laboratory tests of rapidly sheared granular materials <i>K. Iwashita, K. Ichiba &amp; M. Oda</i>	429
Author index	435
